PERSONAL PROFILE

BS Information Technology graduate, Magna Cum Laude, and self-driven full-stack developer with proven experience delivering paid, production-ready software as a solo developer. Built a complete water billing system serving approximately 2,000 households that reduced a 1–2 day manual billing cycle to a streamlined digital process. Capable of working independently across the full stack — from UI design to API development to database architecture — as well as collaborating closely with end users and stakeholders. Strong communicator with three years of student government leadership experience. Highly motivated, continuously learning, and genuinely passionate about building software that solves real problems.

PERSONAL DETAILS

EDUCATION

BS Information Technology | Central Philippine State University | Negros Occidental, PH ·
Graduated June 2026

- Magna Cum Laude — Consistent Dean's Lister throughout the four-year program
- Completed a rigorous IT program covering software development, database management, networking, systems analysis, and web technologies.
- Maintained academic excellence throughout all semesters while simultaneously building real-world projects and taking on freelance work.

TECHNICAL SKILLS

Frontend: React.js (Advanced), Next.js (Advanced), TypeScript (Advanced), JavaScript (Advanced), HTML5 (Advanced), CSS3 (Advanced), Tailwind CSS (Advanced), Vue.js (Intermediate)

Backend: Node.js (Advanced), Express.js (Advanced), REST API Design (Advanced), Python (Intermediate), PHP (Intermediate)

Mobile: React Native (Intermediate), Expo (Intermediate), Cross-Platform Mobile Development (Intermediate)

Databases: Supabase (Advanced), Firebase (Intermediate), PostgreSQL (Intermediate)

Automation & AI: n8n (Intermediate), Groq API, Claude API, Gemini, AI Workflow Automation

Tools & Platforms: Git (Advanced), GitHub (Advanced), Vercel (Intermediate), Netlify (Intermediate), VS Code (Intermediate), Postman (Intermediate), Google Sheets

Core Skills: Full-Stack Development, REST API Integration, UI/UX Implementation, Web Performance Optimization, Cross-Browser Compatibility, Debugging, Technical Documentation, Code Review

Soft Skills: Clear Communication with Technical and Non-Technical Stakeholders, Time Management, Problem-Solving Under Pressure, Self-Directed Learning, Adaptability, Attention to Detail

Currently Learning: Bootstrap, Laravel, MySQL, Docker, AWS / Cloud, Figma

WORK EXPERIENCE

Freelance Full-Stack Developer | Self-Employed | Pulupandan, Negros Occidental · Oct 2025 – Apr 2026

- Hired and paid to design and deliver a complete water billing management system for the Pulupandan Water District as a solo developer, serving approximately 2,000 households across the province.
- Reduced the billing cycle from 1–2 full staff days to a streamlined digital process by automating invoicing, receipt generation, and billing cycle management.
- Implemented tiered rate billing logic that accurately computed bills across different cubic meter consumption ranges — the most technically complex component of the system.
- Collaborated directly with 5–6 staff members across multiple requirement-gathering sessions, managing evolving requirements and rebuilding components to accommodate feedback without compromising delivery.
- Delivered three separate web applications: a mobile-responsive Reader App for field meter reading, an Admin Dashboard, and a Cashier Dashboard — each with distinct user roles and access controls across 3 user types.
- Client expressed formal intent to purchase the system for continued operational use upon project completion.

IT Intern — Operations Support | FA Nepan Sales Incorporated | Negros Occidental · Jul 2025 – Oct 2025

- Assigned to the Operations Department, supporting billing operations and receipt processing for daily transactions.
- Maintained and verified driver and seller transaction records using a structured cross-check and sign-off process.
- Managed repetitive data verification tasks with consistent accuracy under time-sensitive, real-world conditions.

PROJECTS

Outreach Machine — AI-Powered Lead Generation & Outreach Automation · n8n · Groq API · Google Sheets · Gmail

- Built an AI-powered lead generation and outreach system that identifies prospects, qualifies leads, detects business pain points, and generates personalized outreach campaigns.
- Features automated lead scraping across multiple niches, lead enrichment, AI-powered scoring and qualification, pain-point detection, personalized email generation, and automated follow-up sequences.
- Processed 200+ qualified leads with structured outreach workflows for business prospecting and client acquisition.

Synlo — AI Lead Automation Platform · n8n · Groq API · Google Sheets · Tally · Typeform · Facebook

- Designed and built a full AI-powered lead automation system integrating three lead sources — Tally, Typeform, and Facebook — via a unified webhook pipeline with a Switch node that normalizes incoming data.
- Integrated Groq LLM to automatically qualify and score every incoming lead 1–10, generating a structured JSON score and summary for each submission.
- Engineered three routing branches — Hot, Warm, and Cold — each with personalized email sequences and timed follow-up intervals (2, 3, 4, and 5-day delays).
- Hot leads trigger an immediate real-time owner notification with full lead details and AI score, enabling fast manual follow-up on high-value prospects.

- All leads automatically logged to Google Sheets with name, email, company, needs, AI score, summary, and submission timestamp.

NORTH — AI Skill Matcher & Career Path Tool — north-wana.vercel.app · React.js · TypeScript · Groq API · Supabase

- Designed and built an AI-powered web application that maps a user's existing skills and surfaces actionable income paths and career directions based on their profile.
- Integrated Groq API LLM decision logic to generate personalized, context-aware recommendations for each user.
- Built end-to-end: UI design, React.js/TypeScript frontend, backend API, and Supabase database integration.

MoodByte — Aesthetic Productivity Web App — mood-byte-five.vercel.app · React 18 · Vite

- Built a personal productivity app combining a Pomodoro timer, task manager, mood tracker, and music player inside a customizable themed environment with animated pixel-art backgrounds.
- Engineered a virtual study pet with a custom requestAnimationFrame-based physics engine and a loot/treat reward mechanic tied to completed focus sessions.
- Implemented a 9-milestone achievement system, daily streak tracking, and persistent local storage via localStorage and IndexedDB for custom backgrounds and history.

After Midnight — Thought Release App · Mobile Application

- Conceived and built a mobile app with a unique constraint: it only unlocks between 12:00 AM and 4:00 AM, designed as a space for late-night thought release and journaling.
- Implemented time-based access control logic that locks and unlocks the app based on the device's local time.
- Designed a minimal, distraction-free UI intentionally built for low-light, late-night use.

Tindadone — Universal Point of Sale System · React Native · Expo · IndexedDB

- Currently developing a full-featured offline-first POS mobile app designed for any type of retail store — food stalls, sari-sari stores, hardware shops, machine parts dealers, and more.
- Core features include stock management, credit tracking per customer, and expense monitoring — all in one unified platform.
- Architected to be flexible enough to handle different product types and pricing structures across store categories.

Viper — CLI Security Recon Toolkit · Python

- Building a personal recon and security toolkit in Python, currently on V2 with core modules working across port scanning, DNS recon, subdomain enumeration, OSINT, hash cracking, and vulnerability scanning.
- Designed around a strict separation of concerns — modules return raw data only, with all terminal rendering and report generation centralized in a dedicated output layer.
- Supports HTML and JSON report export, typed config management via `~/.viper/config.json`, and two scan modes: a fast default flow (viper bite) and a full-assault deep scan (viper venom).

LEADERSHIP & INVOLVEMENT

Supreme Student Government Member | Central Philippine State University | Philippines · 2022 – 2026

- Actively participated in student governance, policy discussions, and campus-wide initiatives for three consecutive years.
- Represented student interests in official university matters and contributed to decisions affecting the student body.

Floor Leader (2nd & 3rd Year) | Central Philippine State University | Philippines · 2023 – 2025

- Elected by peers to serve as floor leader — coordinated floor-level activities and acted as the primary liaison between students and faculty.
- Developed strong communication, conflict resolution, and organizational skills through consistent leadership responsibilities.

SSG Volunteer (1st Year) | Central Philippine State University | Philippines · 2022 – 2023

- Volunteered under the Supreme Student Government in university-wide events and community outreach programs.

ACHIEVEMENTS & AWARDS

- Magna Cum Laude — Graduated with the highest Latin honor distinction from Central Philippine State University, 2026
- Consistent Dean's Lister — Maintained Dean's List standing for all semesters throughout the four-year degree program
- Paid Freelance Developer while a Student — Successfully delivered a production-ready billing system for a real client while completing full-time studies
- Client Purchase Intent — Developed a freelance system of sufficient quality that the client expressed formal intent to purchase it for continued operational use
